EDUCATION

VIT Bhopal University, Bhopal, MP | Expected May 2028

B.Tech in Computer Science & Engineering (Specialization: Cyber Security & Data Science)

• Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems (DBMS), Operating Systems, Distributed Systems, Computer Networks.

TECHNICAL SKILLS

- Languages: Python, TypeScript, JavaScript, SQL (PostgreSQL), C/C++, HTML5/CSS3.
- Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Tailwind CSS, Fastify.
- Databases & Middleware: PostgreSQL, MongoDB, Redis, WebSockets, REST APIs.
- Tools & DevOps: Docker, Git, GitHub Actions, n8n, Postman, Linux/Bash, Vercel.

PROJECTS

QuickMart — Campus E-Commerce & Order Management Engine | Next.js, PostgreSQL, Stripe | 2025 – 2026

- Architected a full-stack campus marketplace with automated inventory tracking, achieving 100% order accuracy and 500+ daily transactions.
- Designed normalized PostgreSQL schemas with indexed queries, ensuring sub-100ms response times across 1,000+ SKUs.
- Integrated Clerk and Stripe webhooks to automate receipt generation, reducing manual vendor reconciliation by 40%.

Autonomous Quantitative Trading Systems | Python, WebSockets, Pandas, Docker | 2025 – 2026

- Engineered low-latency trading bots via persistent WebSockets to process 10k+ tick-by-tick data points/sec.
- Developed quantitative momentum algorithms with stop-loss risk controls, maintaining a 15% net alpha over market baseline.
- Containerized the pipeline with Docker for cloud deployment, achieving 99.9% uptime for continuous execution.

Event-Driven Membership & Operations Engine | n8n, Webhooks, RESTful APIs, PostgreSQL | 2025

- Built an event-driven automation pipeline for 300+ member lifecycles using webhook triggers and database synchronization.
- Configured automated renewal alerts via WhatsApp and Email APIs, reducing member churn by 25% and manual tracking by 70%.

Peer Expense Simplification Engine | React.js, Node.js, Express, Graph Algorithms | 2025

- Implemented a Minimum Cash Flow graph algorithm in a collaborative platform, reducing settlement transactions by 60%.

WORK EXPERIENCE

The Red Users | Cyber Security Intern (Remote) | Feb 2025 – Mar 2025

- Conducted web application security assessments using Burp Suite and OWASP ZAP to identify high-risk vulnerabilities.
- Configured firewall rules and access control policies, reducing potential attack surfaces by 30%.

India Space Lab | Space Technology Intern (Remote) | Dec 2024 – Jan 2025

- Researched satellite telemetry and CubeSat communication protocols to document embedded systems architectures.
